NOTES ABOUT MAXIMUM ROOF SPANS

- The specified dimensions do not supersede the requirements of local construction codes.
- The given spans are according to deflections criterion of $\mathrm{L} / 20$, and minimum slope of $10 \%$.
- The maximum roof spans are based on calculation model and practical testing.
- The mentioned load refers to wind and snow load only.
- For vertical application spans can be increased by $10 \%$.

## PRODUCT:

FASTENER AND WASHER SPECIFICATION FOR THIS PROFILE

| Valley Fixing | Crest Fixing | Side Lap Stitching |
| :--- | :--- | :--- |

## FASTENING

- Apply sealing tape over the SUNSKY panel side-lap corrugation crests, where covered by the next panel.
- Apply sealing tape along the bottom and top end-lap (if there is one), along screw center line or two tapes on both sides of screw center line.
- Pre-drill $3 / 8^{\prime \prime}$ holes where screws are positioned.
- Fasten the screws according to the fastening illustrations below, starting from the first side-lap through, the pre-drilled holes.
- Fasten the Side Lap Stitching Screws or Grommets at every 12-16 inches (Fig. 4 or 5).
- Figure 1: End Purlin fastening schedule.
- Figure 2: intermediate Purlin fastening schedule.
- Figure 3: Side Lap Screw at corrugation crown
- Figure 4: Grommet seal in between purlins spaced at 12"-16"

DO NOT OVER-TIGHTEN! Washers should be perpendicular to purlin, and tightened to the point where they are firmly seated, but not bulging.

## PANEL OVERLAP AND OVERHANG

- Recommended longitude overlap of 8" above purlin.
- Each panel to extend 4" over the fixings line on the purlin.
- Panels should overhang a minimum of 2 inches and maximum 6 inches beyond the row of fasteners.

## CURVED ROOF APPLICATIONS

- Minimum curving radius 16 feet
